Fastrack and Authentidate Develop an Interface to Streamline Care Order Processing and Enable Physician eSignatures

Plainview, NY

February 19, 2013

Authentidate Holding Corp. (Nasdaq: ADAT), a provider of secure web-based software applications and telehealth products and services for healthcare organizations and Fastrack™ Healthcare Systems announced today that they have entered into an agreement to provide ongoing development updates and support for an interface between Authentidate's Inscribe® Referral and Order Management solution and the Fastrack™ Enterprise System. The interface automates electronic record transfer between the two systems and has already been successfully implemented at some client locations. Together, these two complimentary solutions form a powerful, fully electronic practice management solution with enhanced workflow capabilities for online referral and order management.

The Inscribe Referral and Order Management solution is a web-based software service that enables providers and suppliers to process referrals and care orders faster and more accurately than ever before. Physicians can use Inscribe to exchange, update, complete and electronically sign referrals and care orders quickly and accurately using this solution. Inscribe also provides electronic fax services so physicians that have not yet converted to electronic records can elect to continue to communicate via fax. The improved workflows provided by Inscribe have a proven track record of reducing turnaround time, improving completeness and reducing overheads and Days Sales Outstanding (DSO) related to delays in processing patient care documentation required for reimbursement. Inscribe's streamlined workflow also improves communications with referring physicians.

Sunil Hazaray, Chief Commercial Officer at Authentidate said, "The interface between Fastrack and Inscribe can be used to reduce paperwork management for Fastrack clients as well as their referring physicians. Our collaboration with Fastrack opens up new potential for Inscribe to serve Fastrack clients and referring physicians who can benefit from Inscribe's streamlined workflow and eSignature capabilities."

The Fastrack Enterprise System is designed for Home Healthcare Agencies (HHA), Infusion Pharmacy and Durable Medical Equipment (DME) companies. It is built on an industry-leading architecture that allows quick adaptation to new technologies and easy integration to external applications for effective information exchange. Fastrack automates virtually every aspect of business for HHA, Infusion Pharmacy and DME companies.

Spencer Kay, President at Fastrack said, "I believe that the Inscribe interface provides significant value-add for our Fastrack clients to help them eliminate paperwork and improve their DSO. Fastrack is also a viable alternative for many Inscribe clients who may want to upgrade

their older enterprise management system and still retain the advanced features provided by Inscribe.”

About Fastrack Healthcare Systems, Inc.

Fastrack is a leading supplier of software and technology to Home Medical Equipment providers, Durable Medical Equipment, Respiratory Providers, Home Infusion Pharmacies & Home Healthcare Agencies. Fastrack offers a solution for each individual segment of homecare as well as one system encompassing virtually every clinical, operational and financial aspect of a provider’s business, automating several or all of these product/service lines within one integrated Microsoft SQL database.

About Authentidate Holding Corp.

Authentidate Holding Corp. is a provider of secure web-based software applications and telehealth products and services that enable healthcare organizations to coordinate care for patients and enhance related administrative and clinical workflows. Authentidate’s products and services enable healthcare organizations to increase revenues, reduce costs and enhance patient care by eliminating paper and manual work steps from clinical and administrative processes. Authentidate’s telehealth solutions combine patient vital signs monitoring with a web application that streamlines patient care management. Delivered as Software as a Service (SaaS), customers only require an Internet connection and web browser to access our web-based applications thereby utilizing previous investments in systems and technology. The company’s healthcare customers and users include leading homecare companies, health systems, physician groups and governmental entities. These organizations utilize the company’s products and services to coordinate care for patients outside of acute-care.
