Fastrack Adds Dynamic Routing & GPS Tracking to Delivery Automation

-Integration to Tom Tom Web Fleet Navigation

-Process Credit Cards from the Patient's Home

Plainview, NY... Fastrack Healthcare Systems, Inc. announced today the completion of integration to the Tom Tom Web Fleet product line that allows for a new dynamic routing capability incorporating GPS technology. Fastrack clients will use this capability in conjunction with the company's enterprise software solution for Home Medical Equipment (HME DME), and Respiratory and Home Infusion Pharmacy providers.

With this integration, clients of Fastrack's Routing and Delivery Automation module can send optimized routes to the Tom Tom device in each delivery vehicle. The device provides turn-by-turn directions and will present the driver with the most efficient driving route for the day's orders and maintenance services being performed. Fastrack Routing will analyze the orders for the day and the available vehicles and utilizing sophisticated routing algorithms will determine which orders should go on each truck and determine the most optimized route for the truck to drive, taking into consideration various factors including required time windows. The system will provide estimated arrival times for each stop, allowing customer service to respond to inquiries regarding when the product will be delivered.

Since Tom Tom supports GPS, the provider can simply access an on-line map from the Internet to see the location of their driver's real time and assign new orders throughout the day to the nearest driver capable of servicing the patient. The Fastrack system will then upload the new order to the appropriate driver's PDA or Tablet PC/Notebook. This allows the driver to scan the bar codes to confirm the right product is being delivered, capture serial and/or lot numbers and collect the patient's signature acknowledging receipt of the products. This information is automatically sent via a data/cellular connection back to the server to automatically confirm the delivery eliminating this time consuming error prone process.

According to Spencer Kay, President of Fastrack, "Dynamic routing will allow our clients to quickly respond to new and emergency orders throughout the day in a quick and efficient manner which will lead to improved patient satisfaction. Fastrack Delivery Automation provides the added benefit of allowing orders to be billed real time throughout the day without having to wait for the driver to return to the office."

Another new feature is the ability to process credit cards real time in the field allowing the driver to collect C.O.D. amounts including co-pays, traditionally a major collection problem for providers. Fastrack can process all credit card types including American Express, Visa, MasterCard, Discover, etc.

The Fastrack Delivery and Routing system is designed to reduce mileage and therefore gas costs, reduce overtime, and improve the response to patient and facility customer needs.

Fastrack Healthcare Systems is the leading supplier of software & technology to Home Medical Equipment providers, Durable Medical Equipment and Respiratory Providers, Home Infusion Pharmacies & Home Healthcare Agencies. Only Fastrack offers a solution for each individual segment of Home Care as well as one system encompassing virtually every clinical, operational and financial aspect of a provider's business, automating several or all of these product/service lines within one integrated Microsoft SQL database.
