Routing System Enhancement Reduces Delivery Costs for Providers

Plainview, NY...Fastrack Healthcare Systems today announced the availability of a new advanced optimization service that will substantially reduce fuel and overtime costs for a provider's delivery operation.

Fastrack's new optimization service can process an unlimited number of orders and vehicles, and determine which order should be allocated to a specific delivery truck, taking into consideration time constraints. For example, if a patient is being discharged from the hospital today, the system will allocate the orders to help ensure it is delivered within time windows (i.e. – must be at patient's home by 10AM). Other considerations include the weight capacity of the vehicle and the desire to utilize certain trucks or personnel for a particular order.

“Fastrack Routing & Dispatching builds intelligent routes based on actual network drive times, not straight-line distances. Fastrack retrieves the orders or assignments for the day and constructs the route that optimizes drive time reducing costs. A major benefit is the ability for customer service to provide better estimates of delivery times to the patient or facility. Fastrack produces color-coded street maps with turn-by-turn instructions and a complete driver manifest. It will cut travel time, thereby reducing fuel and overall truck operating costs, as well as reduce or eliminate overtime,” stated Spencer Kay, President of Fastrack.

Introduced in 1998, Fastrack was the first to offer an integrated solution for HME and Infusion Pharmacies to automate their delivery operations.

Fastrack Routing and Dispatching can also be used in conjunction with Fastrack's Wireless Warehouse Automation for order fulfillment, receiving and physical inventory utilizing bar code enabled PDA devices.

Fastrack is the leading supplier of software & technology to Home Medical Equipment providers, Durable Medical Equipment and Respiratory Providers, Home Infusion Pharmacies & Home Healthcare Agencies. Only Fastrack offers a solution for each individual segment of Home Care as well as one system encompassing virtually every clinical, operational and financial aspect of a provider's business, automating several or all of these product/service lines within one integrated Microsoft SQL database.
